

Supplementary Figure 1. Distribution of citations across the 850 included articles. **(a)** Lorenz curve of citation concentration; the dashed line indicates perfect equality. The 10% most cited articles account for 63.8% of all citations. **(b)** Histogram of citations per article (symmetric-log scale); 242 articles (28.5%) were uncited at the search date (4 July 2026).

Supplementary Figure 2. Distribution of total citations across Web of Science subject categories (top 12). Categories may be multiply assigned to source journals; counts use full counting, so category totals can exceed the number of included articles.
